

April 28, 2019

Good Afternoon Families,

I hope you are enjoying the beautiful weekend weather. The students worked so hard this past week. In math, we continue to practice place value. I was so proud of the class as they confidently completed their mid-module assessment. They did a wonderful job and now the class is using their knowledge to solve addition and subtraction problems. In language arts, students worked on their r controlled vowel words. We strengthened our understanding of adjectives, too. The class loves poetry and, as we explore it more, they are understanding different elements of poetry. This week, the students learned about onomatopoeia and created onomatopoeia word art. Students also learned about alliteration as we read silly tongue twisters and read the story Some Smug Slug. In science, students began creating their 3D insect models.

Next week, students will be learning about other ways to make the long o sound. We will continue to examine alliteration in poetry and write some of our own alliterations. We will also be using our 5 senses to write poetry. Students will continue to apply their place value understanding in math. In science, students will learn about presenting their project and practice presenting to their classmates.

As we move into May, some days will be early dismissal for all students, due to assessments and other events. This information is also available on the school website.

### Important Dates
